PROFILE

MEng Cybersecurity graduate and Service Desk Engineer who builds security into delivery pipelines. I ship working tooling: CI/CD scanning gates, CIS AWS auditing, Docker/Kubernetes/Ansible deployments and ML log anomaly detection, and I work AI-first with Claude Code and Copilot. Seeking DevOps, DevSecOps, Cloud Security or SOC roles in Cyprus or remote.

EXPERIENCE

Service Desk Engineer · CDMA Services Ltd., Nicosia Sep 2026 – Present

- Provide Level 1 support across multiple client organisations, resolving about 5–10 tickets a day through triage, troubleshooting, vendor coordination and escalation.
- Administer Microsoft 365 and Entra ID, covering user lifecycle, licensing and access.
- Work daily in the Kaseya stack: Autotask PSA for ticketing, IT Glue for documentation and Datto RMM for remote endpoint management.

Co-Lead & Core Team Developer · Google Developer Group, Harokopio University Sep 2023 – Jul 2025

- Grew a dormant chapter from 5 to 50 members and ran monthly hands-on security workshops. Mentored 6 teams (30+ students) at Hellenic University Hack, and all 6 finished in the top 20.

SELECTED PROJECTS

DevSecOps Pipeline Scanner · github.com/GiorgosNicolaides/devsecops-scanner

Python · FastAPI · OSV.dev · GitHub Actions · Docker · pytest

- CI/CD security gate that checks PyPI, npm, Go and Cargo dependencies against OSV.dev and detects hard-coded secrets. Ships as a CLI, API, Docker image and GitHub Actions workflow that fails the build above a set severity.

Cloud Misconfiguration Auditor · github.com/GiorgosNicolaides/cloud-auditor

Python · Boto3 · AWS · LocalStack · FastAPI · Docker Compose

- Automated 14 CIS AWS Foundations controls (S3, IAM, Security Groups) with severity-ranked findings served from a rate-limited API. A Docker Compose stack on LocalStack makes it testable at no cloud cost.

End-to-End CI/CD & Kubernetes Delivery · team project

Jenkins · Ansible · Docker · Kubernetes · cert-manager · Nginx · PostgreSQL · Azure

- Delivered a Spring Boot + Vue application through Jenkins pipelines to three targets: VMs via Ansible, a remote Docker Compose host, and Kubernetes with TLS Ingress, health probes and PVC-backed PostgreSQL.

AI-Powered Threat Detection Engine · github.com/GiorgosNicolaides/threat-detection-engine

Python · scikit-learn (Isolation Forest) · FastAPI · Docker

- Unsupervised anomaly detection on OpenSSH and Apache logs. Flags brute force and root login attempts, with a severity and plain-English reason on each alert.

EDUCATION

Master of Engineering, Cybersecurity · University of Limerick, Ireland Sep 2025 – Aug 2026

- Thesis: SONDA-MA, a lightweight RFID/NFC mutual-authentication protocol in C, formally verified with ProVerif and tested against replay, cloning and desync attacks.
- Built an ECDSA P-256 authentication protocol for LEO satellite IoT on a Docker testbed, with key generation 1,807× faster than RSA-2048.

BSc Informatics & Telematics · Harokopio University, Greece Oct 2021 – Jul 2025

- Thesis (graded 10/10): built COVSAW, an AST-based static analyser with 30+ CWE-mapped crypto-misuse rules, benchmarked against Semgrep and Bandit on 200 files.

CERTIFICATIONS & SKILLS

Certifications	Sophos Certified Endpoint Engineer (2026) · Sophos Workspace Protection (2026) Kaseya: Datto RMM, Autotask PSA, IT Glue
Cloud & IaC	AWS (S3, IAM, EC2/Security Groups), Boto3, LocalStack, Azure, Ansible, Vagrant, Linux hardening
Containers & CI/CD	Docker, Docker Compose, Kubernetes, Nginx, GitHub Actions, Jenkins, GHCR, Make, pytest
Security	SAST (Semgrep, Bandit), CIS Benchmarks, MITRE ATT&CK, SIEM (ELK, Splunk), Nmap, Burp Suite
AI & Automation	Claude Code, Claude API, OpenAI API, GitHub Copilot, prompt & skill engineering, scikit-learn
IT Operations	Microsoft 365, Entra ID, Autotask PSA, IT Glue, Datto RMM, Sophos Endpoint
Programming	Python, Bash, C, Java, TypeScript, SQL · FastAPI, Node.js, Spring Boot, PostgreSQL
Languages	Greek (native), English (fluent)
